BEARS ARM'S NARRATIVE OF EAGLE-TRAPPING. II

223 Early in fall the leader, Wolfs Eyes, said, "I am going out eagle-trapping." There are two ways of getting up a group; some leaders accept volunteers, or the leader may select his men. We went to him and said. "We wish to go with you," and he said that it would be all right. He told us to take certain products from the garden such as roast corn, dried yellow corn, white flour corn, and dried squash. Some prepared their own baits at home. Most of the baits were stuffed jackrabbit skins. Those who did not have any baits made them after we were located at the eagle-trapping lodge and the tepees had been put up. Some would use a piece of deer hide cut up with ears on and two legs on the side.

In the party were the leader, Wolfs Eyes; Big Walk; Little Crow; Lance Owner; Little Bull; Holding Eagle; Black Bear; SittingWoman; White Body; Bears Arm; Louie Wolf or Red Horse; Many Birds; a boy, Spotted Weasel; Little Crow's wife, Otter Woman, and their daughter, Comes Out; Big Walk's wife, Plain Blossom, and their grandson, Jim Foot or Foot Prints; Plain Blossom's daughter, Too Costly; Woman in Water, wife of Charging Eagle, and her son, Richard Burr; Lance Owner's wife, Yellow Stalk; Holding Eagle's wife, Bobcat Woman. Charging Eagle being a policeman, he could not get away, but his wife, being Bears Arm's mother's sister, went along to help with the work in the camp. Also my mother's mother and Woman in Water were [462] sisters. There were several women along because there was much to do, since in bad weather we would go out and kill mountain sheep, elk, and deer, so the women came along to care for the meet and hides.

484 When everything was ready, the young women took their bullboats to the 492 river and crossed our stuff consisting of tepees, poles, provisions, bedding, and cooking utensils. It took nearly all day to cross the stuff. The first camp was at Beaver Creek. We used tepee poles tied together as travois. The horses pulled poles with the tepees and bedding, while several additional pack horses were loaded down with bedding. We were all on horseback and traveled very slowly. When traveling, the leader was at the head of the party, while the hunters were to the side or in advance of the others.

●487 The second day we traveled to End of World Buttes and stopped northeast of Killdeer the third night. After camping on the east side of Killdeer, we went around the north side of the Killdeer Mountains and camped on the north side. From there we went north because that was the best route to cross the Little Missouri River. After we left the Little Missouri, we went to the place called Wolf Pit. When we reached our destination, we commenced to put up our lodge, for there was no lodge there before.

223 The place was selected by the leader because of the presence of a prairie-dog town there in a valley extending from the Yellowstone River eastward to the Little Missouri. All along that valley there were prairie dogs, and the eagles traveled along this valley in order to catch these animals. Then the Indians would come to this site, and our leader thought that it would be a good place to catch the birds.

346 As soon as the camp was selected, all set to work erecting the lodge, even 784 the women helped by cutting the grass to pack between the poles and digging 223 dirt to put over the lodge. There was an opening at the top for the sparks and smoke. There were four posts and railing on top, while the rest of the poles

177 white, would be favorably predisposed toward white ways. But the descend-
121 ants of the previously mentioned Irishman are biologically part white, yet they remain unacculturated; and there are three families who have had a white model but who have not become acculturated. Another possible explanation is that the lighter skin color per se allows the children of mixed marriages to "pass" in local white society. The data does not confirm this notion either, as an Indian's ability to be accepted by local whites depends upon how he behaves rather than upon his racial characteristics. A series of relevant factors in the total situation, when taken together, do give at least partial understanding of the importance of white intermarriage. They add up to a picture of such extreme psychological and social isolation of the Indian people that a white person married into the family becomes the primary agent by which white ways and values are learned and internalized.

131 Lone Hill is physically isolated between the Missouri and the Little Mis-
177 souri rivers, and contact with white people is thus infrequent and limited.
[361] There are no stores, no paved roads, and no post office in the village. The
● 487 only whites who reside in Lone Hill itself are the two teachers in the govern-
488 ment grade school, who rarely participate in community affairs. None of the whites currently married to Indians live permanently in the village today, although a few couples occasionally return to Lone Hill, during which time they stay with Indian families. There are two ways to travel to the surrounding towns: either across the Missouri River by boat during the summer and over the ice in winter, or by making a sixty-mile trip over dirt roads through irregular rolling hills and flat-topped buttes. Anyone who has lived in Lone Hill during the late spring comes to realize the meaning of isolation. The ice over the river is too thin for passage, the roads become blocked by mud and melting show, and the one telephone usually breaks down and remains unrepaired. Mail and supplies are often dropped by airplane. The physical isolation works in a double way—few whites come to Lone Hill and few Indians leave.

105 The Mandan-Hidatsa have never experienced a serious ecological read-
177 justment, as they have lived along the Missouri River Valley for at least the two centuries preceding the completion of this study in 1953. The Indian people today are certainly dependent upon the American economic system for their cash income, but almost every family in Lone Hill derives a relatively large noncash income from exploitation of the natural resources of the area. This exploitation is similar in some respects to the adjustment made by the aboriginal earth lodge tribes to the same fertile river bottom lands. Fuel is provided by wood from the timber, and from indigenous lignite outcroppings. Over half the families live in log cabins, which they erect themselves from timber found in the wooded bottoms. The food staples of corn and potatoes are obtained in part from small garden plots, now jointly worked by the men and women of the household. The meat supply depends largely upon the man's ability as a hunter of deer and small game. Abundant wild fruits and berries are gathered during the appropriate seasons and are preserved for use during the winter months. Thus, many of the economic goods which are normally
